

Hi everybody! This is

Giuseppe Vitucci

I got a Master's degree in Nanotechnology Engineering

...and

I am now enrolled at University of Milano Bicocca as PhD student in Physics

My current research focuses on the simulation, fabrication and test of new detectors for thermal neutrons, especially intended for the European Spallation Source.

So my goal here is to acquire a bunch of new methods and concepts that will be applied in my current work, as well as in all my future projects.

**Thanks for this opportunity. See you around here!**
